**T T-MOBILE
FOR BUSINESS**

Care *without compromise.*

**A guide to secure, mobile,
modern healthcare.**

The best Galaxy. The best business plan. America's Best Network.

Best business plan based on combination of advanced network performance, coverage layers, and security features.
Best Mobile Network in the U.S. based on analysis by Ookla® of Speedtest Intelligence® data 1H 2026.

Patient trust
is built one
connection
at a time.

Old devices and weak networks put patient data and clinicians' time at risk.

Your patients trust you with their most personal information. Keeping it safe and keeping clinical teams connected is getting harder as care moves beyond the clinic walls and across teams that are rarely in the same room. The Samsung Galaxy S26 Ultra with Galaxy AI, running on our 5G network with SuperMobile, gives healthcare teams a simpler way to stay connected and protected.

What's inside this guide:

In the pages ahead, you'll see how the right phone and network can help your practice:

- **Keep your team in sync** across shifts, floors, and locations.
- **Protect patient data** in every setting.
- **Give clinicians their time back** with less paperwork and more patient time.
- **Stay on top of HIPAA** without adding more to your IT plate.
- **Stay connected** when care takes you outside the office.

\$9.36M

Average cost of a healthcare data breach in 2024. Healthcare has been the costliest industry for breaches 14 years running.¹

\$265B

The amount of care shifting to home-based settings, where reliable mobile connectivity matters most.³

13+ hours a week

The time physicians spend on documentation and admin instead of patients.²

1 in 4 shift hours

How much of a nurse's shift goes to EHR systems, not patient care.²

SAMSUNG

T-MOBILE
FOR BUSINESS

Your team
works better
when they're
on the
same page.

Shifts change and details get lost. The right tools keep everyone aligned.

Good care depends on good handoffs. Whether your team is passing information between shifts, coordinating across locations, or juggling a packed outpatient schedule, you need tools that keep everyone in sync.

The Samsung Galaxy S26 Ultra gives every team member AI-powered tools to stay connected and aligned:

-  **Now Brief:** A daily snapshot of top-priority patients, open tasks, and what's coming next. Every shift starts with a clear plan.
-  **AI Voice Transcription:** Capture handoffs, clinical notes, and team discussions hands-free, so important details don't slip away.
-  **Now Nudge:** Smart reminders keep follow-ups and patient tasks on track during the busiest shifts.

 **T-Mobile SuperMobile** is the plan that puts your team's data first, so care coordination keeps moving without lag or drops. America's most consistent network gives you reliable connectivity you can count on.

Most Consistent and Fastest: Based on analysis by Ookla® of Speedtest Intelligence® data national Consistency Score(TM) and data national Speed Score results incorporating 5G download and upload speeds for 1H 2026.

Patient
privacy
matters
everywhere.

From the front desk to the bedside, your phone needs to keep private information private.

In healthcare, patient privacy isn't just an ethical obligation, it's a legal one. The Samsung Galaxy S26 Ultra is built to protect protected health information wherever care is delivered.

Here's how it protects patient data day to day:

Privacy Display: The first auto-dimming screen of its kind blocks side views, so what's on screen stays between you and your patient.

Samsung Knox: Built-in security helps you meet HIPAA access requirements without slowing your team down.

Secure Folder: Keep patient-related files, photos, notes, and apps separated in an encrypted workspace.

With **T-Mobile Threat Protect**, our 5G network blocks cyber threats automatically across Wi-Fi and cellular, before they reach patient data. And with SuperMobile, it's built in at no extra charge, compared to our competitors.

Threat Protect: Capable device, app download, and subscription (included with plan) required.

Less time on
paperwork.
More time
with patients.

Documentation pulls clinicians away from the work that matters most.

In healthcare, every minute spent on documentation is a minute away from a patient. The Samsung Galaxy S26 Ultra uses Galaxy AI to streamline clinical documentation and administrative work, giving your team more time to focus on patients.

The Samsung Galaxy S26 Ultra is built to give time back to your clinical team:

-  **Galaxy AI productivity:** auto-generates clinical summaries, organizes notes, and handles routine admin work, so your team spends time with patients instead of paperwork.
-  **Galaxy AI Live Translate:** Help bridge language barriers with real-time translation during conversations.
-  **AI-Enhanced Document Capture:** Quickly convert paper documents into clear digital records using intelligent document detection, automatic cropping, and image enhancement.

 **T-Mobile SuperMobile** gives optimized connectivity on our 5G network so that the apps you rely on stay fast and responsive all shift long. And with the Best 5G availability, connectivity follows your clinical team virtually everywhere.

Opensignal Awards – USA : Mobile Network Experience Report, July 2026

World's Best 5G Availability: Opensignal Awards – 5G Global Mobile Network Experience Awards, T-Mobile USA large land mass group & T-Mobile Puerto Rico small land mass group, 2024, based on independent analysis of mobile measurements recorded during the period January 1–June 29, 2024.

HIPAA compliance, handled across every department.

Growing teams and new locations make security harder. The right tools make it simpler.

Whether you're running a specialty practice, a regional health system, or a network of outpatient sites, HIPAA isn't optional. Neither is the technology that supports it. The Samsung Galaxy S26 Ultra gives IT the controls to keep the whole organization protected without making clinical work harder.

Here's how it gives your IT team a clearer view and tighter control:

Samsung Knox Manage: NIAP-certified security lets IT manage every AI feature, app, and data policy across your fleet, so HIPAA access and audit requirements stay covered.

Samsung Knox Admin Portal: Provision, update, and retire devices from a single dashboard. Onboard new staff in minutes and decommission devices safely when it's time.

Privacy Display: the world's first built-in privacy display on a phone that blocks unauthorized viewing of patient data. No setup needed.

For an added layer of protection, **T-Mobile Threat Protect** automatically blocks cyber threats across Wi-Fi and 5G, supporting HIPAA without adding work for your team.

Threat Protect: Capable device, app download, and subscription (included with plan) required.

Galaxy S26 Ultra

One device that supports the whole team, from bedside nurses to practice managers.

The all-in-one device for every care team member, from bedside nurses and clinical coordinators to home health workers and practice managers. And on T-Mobile for Business, it's built on the Best Mobile Network in the U.S., according to Ookla®.

Here's what makes it the right device for healthcare:

-  **Privacy Display:** the first of its kind that keeps patient data shielded from side views, everywhere care happens.
-  **Galaxy AI Productivity:** faster clinical summaries, smarter workflows, less documentation.
-  **Samsung Transcript Assist:** speech-to-text AI technology that translates, transcribes, and summarizes conversations.
-  **Samsung Knox for Business:** HIPAA-aligned security with IT-level fleet control.

Care doesn't stop at the clinic door, and your connection shouldn't either.

Home visits, rural sites, pop-up clinics, multi-location practices: Today's care happens everywhere. Your team needs a connection that goes wherever patients do, on the Best Mobile Network in the U.S. with T-Mobile.

Here's how SuperMobile keeps care moving:

-  **Performance that keeps up:** SuperMobile gives your business optimized connectivity on our 5G network, so telehealth calls stay clear, patient records load fast, and clinical apps respond in busy facilities or high-demand environments.
-  **Security built in:** Every patient communication travels over a network with encryption and Threat Protect built into the 5G architecture, supporting HIPAA in the background so your clinical team doesn't have to.
-  **Coverage that goes where care does:** From rural homes to remote sites where cell signal drops, T-Satellite via Starlink extends our coverage to almost anywhere you can see the sky. No extra gear, just a connection when your next patient needs you.

T-Mobile SuperMobile helps keep your team's devices and data secure when it matters most. With fewer interruptions and less downtime, your team can connect seamlessly, move faster, and get more done.

Threat Protect: Capable device, app download, and subscription (included with plan) required. **T-Satellite:** Texting & select satellite optimized apps available with compatible device in most outdoor areas where you can see the sky. Satellite service, including 911, may be delayed, limited, or unavailable. **Best Mobile Network** in the U.S. based on analysis by Ookla® of Speedtest Intelligence® data 1H 2026.
