C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

T-Mobile U.S. Inc. (NASDAQ: TMUS) is America’s supercharged Un-carrier, delivering an advanced 4G LTE and transformative nationwide 5G network that will offer reliable connectivity for all. T-Mobile’s customers benefit from its unmatched combination of value and quality, unwavering obsession with offering them the best possible service experience and indisputable drive for disruption that creates competition and innovation in wireless and beyond. Headquartered from Bellevue, Washington and Overland Park, Kansas, with corporate offices in Frisco, Texas, T-Mobile provides services through its subsidiaries and operates its flagship brands, T-Mobile and Metro by T-Mobile.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

<table>
<thead>
<tr>
<th>Reporting year</th>
<th>Start date</th>
<th>End date</th>
<th>Indicate if you are providing emissions data for past reporting years</th>

USD

C0.5

(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your chosen approach for consolidating your GHG inventory.

Operational control

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

Yes

C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual(s)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Board-level committee</td>
<td>The highest level of responsibility for climate-related issues at T-Mobile resides with the T-Mobile Board of Directors (BoD) committees, Audit Committee and Nominating and Corporate Governance Committee. The Audit committee makes the final decision on which key enterprise risks the Board further investigates. For example, in 2020 the committee reviewed climate-related risks, including but not limited to, risks such as (a) Regulation, Legislation, and Enforcement, (b) Business Disruption, Preparedness, and Recovery, (c) Employee Health and Safety, and (d) Corporate Social Responsibility. The Nominating and Corporate Governance Committee also receives regular updates on ESG matters during quarterly meetings.</td>
</tr>
</tbody>
</table>
C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

The President of Technology and the EVP Chief Communications, Brand & Community Officer have the highest level of responsibility and oversight related to the assessment and management of climate-related issues that impact the business. These positions both sit on the Senior Leadership Team and report directly to the Chief Executive Officer (CEO). The Nominating and Corporate Governance Committee and the Audit Committee have oversight regarding the assessment and management of climate-related issues among other issues and risks. The EVP Chief Communications, Brand & Community Officer provides regular updates to the Nominating and Corporate Governance Committee during quarterly board meetings on key environmental, social and governance issues, risks, opportunities, policy review and progress updates.

Reporting directly to the EVP Chief Communications Brand & Community Officer, the Vice President of Social Impact and Sustainability leads the development and refinement of the corporate purpose strategy, which includes the company's sustainability and climate action strategy. This position works with stakeholders from across the company and value-chain to understand the climate-related and environmental challenges facing the company and where there are the greatest areas of potential impact in order to develop a strategic vision to address climate risks and opportunities. Supporting this work is the company's Sustainability Steering Committee, a cross-functional group led by the VP of Social Impact and Sustainability that oversees the enterprise-wide sustainability strategy. The Committee also evaluates and reviews the progress and impact of the company's sustainability initiatives and goals, including the company's climate action work.

The President of Technology oversees the company's network resilience strategy work, which includes addressing potential climate-related risks and developing risk mitigation strategies that underpin business continuity planning and investment. Supporting this work and reporting up to the Chief Procurement Officer, the Director of Sustainability and Infrastructure Sourcing oversees the day-to-day climate management operations. They oversee a team that includes dedicated sourcing and program managers who work on risk and opportunity identification, energy and emissions performance, renewable energy sourcing and other tasks related to managing climate change at T-Mobile. They also oversee the Energy Working Group (EWG), a cross-functional and cross-departmental team, focused on raising the visibility of energy efficiency as an opportunity for many divisions across the company by working with business units to set goals and track progress.

The Senior Vice President of Internal Audit & Risk Management serves as the Chief Audit Executive and has a direct communication channel to the Audit Committee for purposes of reporting or discussing concerns. The Chief Audit Executive receives monthly status reports of the Enterprise Continuity Program to assess business continuity efforts as well as provides a quarterly enterprise-wide risk assessment to the Audit Committee and communicates to them any significant issues raised by the Enterprise Risk and Compliance Committee. On a macro risk level, our Enterprise Risk Management team, working with the Financial Planning and Analysis group assesses the potential size and scope of climate-related risks as part of our broader quarterly Enterprise Risk Assessment process.
C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

<table>

</tbody>
</table>

C2.1b

(C2.1b) How does your organization define substantive financial or strategic impact on your business?

Our Enterprise Risk Management team works with Financial Planning and Analysis group to evaluate the likelihood and impact of possible climate-related risks.

Definition: The team contextualizes substantive financial impact in terms of company Enterprise Value (EV), market capitalization plus company debt minus its cash. Substantive financial impact is defined as the threshold at which EV is threatened so as to raise climate-related risk to the enterprise level (this value has a wide range from 0 to $4B+). So, for example, the team may evaluate the possibility of both higher maintenance costs and lowered revenues by a damaging weather event. In that case, the team would test to see if these effects would have a substantial impact on the Enterprise Value of the company.

C2.2
C2.2 Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

Long-term

Description of process
We are committed to understanding and addressing the risks and opportunities presented by climate change. Our Enterprise Risk Management team assesses the potential size and scope of climate-related risks as part of our broader quarterly Enterprise Risk Assessment process. A full read-out is reported to the Audit Committee of T-Mobile’s Board of Directors on a quarterly basis. Identified enterprise risks are characterized in the context of likelihood and potential impact, with the report to the audit committee including risks with a substantive financial impact. Risk is considered on a short, medium and long-term basis. Our risk assessment also considers management's risk mitigation activities and controls in place to respond to identified enterprise risks, including climate-related risks. For instance, we partner with the business to track progress on network resiliency efforts, such as investment in permanent power back-up and prioritizing of network hardening efforts in hurricane prone areas. We are also tracking current and emerging risks in corporate social responsibility. Our sustainability team evaluates climate-related risks across multiple business units and the overall enterprise by conducting Task Force on Climate-related Financial Disclosures (TFCD) climate scenario analysis. We analyse the negative financial implications of an unstable environment, regulatory ambiguity, reputational risk and uncertain future energy costs and availability. On an asset level our Network Operations Centers conduct analysis to find where network hardening and redundancy can be improved to mitigate climate-related risks. Case study: Acute physical risk 2017 saw three of the costliest hurricanes in US history. These extreme weather events affected T-Mobile’s [physical infrastructure] and in some cases disrupted day-to-day business which affected our ability to provide reliable service to our customers. This led to the upgrade of our Business Disruption risk to a standalone risk (partially taking aspects from network reliability and BCP from a technology risk). The severe impacts of the storms led to a revaluation of the potential effects of physical climate risk on T-Mobile’s operations by the Enterprise Risk Management team. In response, T-Mobile actively updated its insurance coverage and action plans related to carrier network redundancy should such storms be expected to increase in frequency in the short, medium, and long-term. Upon the completion of these efforts, we moved this risk from ‘managed’ to ‘monitored’ and continue to assess acute physical risk regularly. Case study: Managing transition opportunities: resource efficiency As T-Mobile identified increased regulation as a risk, including effects such as a higher cost for energy, we have worked to reduce our energy load through energy efficiency measures. Even though data flowing through T-Mobile’s network has increased by over 300% in the last five years, using energy-efficient technologies has allowed our energy intensity to decline by over 50%. Efficiency gains in cell towers have been made primarily through improvements in heating and cooling. By implementing new methods of efficiently controlling the on-site temperature of cell towers, T-Mobile is reducing the amount of propane, diesel and electricity needed for power. Other innovations in lighting controls, power factor improvements and on-site solar technology are continuously being developed to improve the performance and reliability of cellular equipment. This achievement is an example of how T-Mobile fundamentally incorporates sustainability into its long-term growth strategy while providing customers with more reliable service.
(C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Relevance &amp; Inclusion</th>
<th>Please explain</th>

Direct operations

**Risk type & Primary climate-related risk driver**

Acute physical  
*Increased severity and frequency of extreme weather events such as cyclones and floods*

---

**Primary potential financial impact**

Increased direct costs

**Climate risk type mapped to traditional financial services industry risk classification**

<Not Applicable>

**Company-specific description**

Extreme weather events can impact critical infrastructure needed to provide service to our customers. With continued digital transformation of the world we operate in, reliable wireless services are becoming more critical in people’s lives, despite increasing severity and frequency of extreme weather events as a result of climate change and the aging grid infrastructure. Our engineering and rapid response teams quickly activate emergency equipment such as fuel trucks, mobile Cell on Wheels (COWs) and back-up power solutions, including portable generators. For the California Wildfires, Hurricanes Florence and Michael, and the Hawaii Volcano, T-Mobile donated $2.6 million in in-kind donations (hotspots, phones, etc). During 2018, we recognized $61 million in costs related to hurricanes, including $36 million in incremental costs to maintain services primarily in Puerto Rico related to hurricanes that occurred in 2017 and $25 million related to hurricanes that occurred in 2018.

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure – minimum (currency)
0

Potential financial impact figure – maximum (currency)
95000000

Explanation of financial impact figure
Such events could cause us to lose customers, lose revenue, incur expenses, suffer reputational damage, and subject us to litigation or governmental investigation. Remediation costs could include liability for information loss, repairing infrastructure and systems, and/or costs of incentives offered to customers. Our insurance may not cover, or be adequate to fully reimburse us for, costs and losses associated with such events. During 2018, we recognized $61 million in costs related to hurricanes, including $36 million in incremental costs to maintain services primarily in Puerto Rico related to hurricanes that occurred in 2017 and $25 million related to hurricanes that occurred in 2018. In 2020 30 events were focused on by the Emergency Management team. They ranged from hurricanes, fires, power shutoffs, and other events. The total spends for 2020 was over $95M for all these events. We estimate the financial impact as being between 0 and 95,000,000 by using the actual figure for 2020 as a stand-in for potential risk.

Cost of response to risk
350000000

Description of response and explanation of cost calculation
T-Mobile evaluates our sites for how vulnerable they are to environmental changes. We have strong backup systems and built in redundancy for our network operations including critical data centers and other facilities. We deploy a variety of fuel cells, generators, batteries and other alternative energy sources depending on the location and needs of the site. Overall, we are spending more than $350,000,000 over a three-year period to harden our network. Case study: Acute physical risk 2017 saw three of the costliest hurricanes in US history. These extreme weather events affected T-Mobile’s [physical infrastructure] and in some cases disrupted day-to-day business which affected our ability to provide reliable service to our customers. This led to the upgrade of our Business Disruption risk to a standalone risk (partially taking aspects from network reliability and BCP from a technology risk). The severe impacts of the storms led to a revaluation of the potential effects of physical climate risk on T-Mobile’s operations by the Enterprise Risk Management team. In response, T-Mobile actively updated its insurance coverage and action plans related to carrier network redundancy should such storms be expected to increase in frequency in the short, medium, and/or long-term. Upon the completion of these efforts, we moved this risk from ‘managed’ to monitored and continue to assess acute physical risk regularly.

Comment
The financial impact depends on the nature of the extreme weather events we face in a given year.

<tr>
<th>Emerging regulation</th>
<th>Mandates on and regulation of existing products and services</th>
</tr>
</thead>
</table>

Primary potential financial impact
Increased indirect (operating) costs

Climate risk type mapped to traditional financial services industry risk classification
<Not Applicable>

Company-specific description
Our ability to provide services and generate revenues could be harmed by adverse regulatory action or changes to existing laws and regulations. This is true across a variety of issues the company faces, including any regulation that creates higher cost burdens on our products or services. Additionally, we could lose revenue as regulation could have the impact of raising taxes or fees for wireless service for our customers. One possible example of this risk could be future state or federal regulation that requires us to operate without reliance on the power grid in times of extreme weather events. This would require more backup power amongst other costs and burdens on our ability to deliver service safety in a state of emergency.

Time horizon
Medium-term

Likelihood
About as likely as not

Magnitude of impact

Are you able to provide a potential financial impact figure?
Yes, a single figure estimate

Potential financial impact figure (currency)
350000000

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
<Not Applicable>
**Explanation of financial impact figure**
If by regulation we were required to operate without reliance on the power grid in times of extreme weather events we would require more backup power amongst other costs and burdens. We are currently investing more than $350,000,000 over a three-year period in hardening our network, this figure could potentially double if we needed to supply power without the utility for extended periods of time.

**Cost of response to risk**
0

**Description of response and explanation of cost calculation**
We report a cost of zero as staying informed of current and emerging regulation is part of our normal operations. We stay informed of current and emerging regulation through our Government Affairs department as well as our membership in industry organizations such as GeSI.

**Primary potential financial impact**
Increased direct costs

**Climate risk type mapped to traditional financial services industry risk classification**
<Not Applicable>

**Company-specific description**
We depend on suppliers, their subcontractors, and other third parties in order for us to efficiently operate our business. While we do not operate in all of the areas in which our suppliers operate, we understand that to some extent our suppliers, for example network hardware suppliers, ability to withstand and recover from climate shocks in their regions (such as Southeast Asia) has a direct impact on our company’s business. We commonly rely upon the suppliers to provide contractual assurances and accurate information regarding risks associated with their provision of products or services in accordance with our expectations and standards such as our supplier code of conduct and our third party-risk management standards. Disruptions or failure of such suppliers to adequately perform could have a material adverse effect on our business, financial condition, and operating results.

**Are you able to provide a potential financial impact figure?**
Yes, a single figure estimate

**Potential financial impact figure (currency)**
100000000

**Potential financial impact figure – minimum (currency)**
<Not Applicable>

**Potential financial impact figure – maximum (currency)**
<Not Applicable>

**Explanation of financial impact figure**
For example, if a large vendor that supplies hardware for our network was to experience a supply chain shock, they could face higher costs that they could pass on to us as a customer. If that vendor raised their prices 10% and we were unable to find a cost mitigation strategy we would be spending potentially an additional $100M if the event raised prices for the entire year

**Cost of response to risk**
400000

**Description of response and explanation of cost calculation**
A third-party risk management process is conducted through a program called Enterprise Supplier Risk Assessment Program (ESRAP). The program assesses risk exposure to a third-party based on the goods or services to be provided by that entity (this includes suppliers, vendors, consultants, service providers and any other entity with whom we have a business relationship). The outcome of ESRAP informs what additional due diligence risk assessments may be required of the third-party before they can be engaged, or re-engaged, by T-Mobile. While there are a few limited classes of engagement (such as working with taxing authorities) that do not require an ESRAP, the vast majority of third-parties are required to go through the process. The Sustainability team is also currently adopting enhanced environmental and social screening of our suppliers. Our management of supply chain related climate risk is integrated into our standard operating procedures, but we are spending approximately $400,000 over a three-year period to upgrade our screening capabilities.

Company-specific description

T-Mobile utilizes approximately 7 million megawatt hours (MWh) of energy across our headquarters, stores, cell towers, call centers and other locations. To address this energy use, T-Mobile has taken the initiative to enter the renewable energy space. Through our renewable energy use we plan to cut our energy costs by around $100 million in the next 15 years with the executed Renewable Energy Purchase Agreements. The REPAs consists of two components: (1) an energy forward agreement that is net settled based on energy prices and the energy output generated by the facility and (2) a commitment to purchase environmental attributes (“EACs”) in the same amount as the energy output generated by the facility. T-Mobile USA will net settle the forward agreement and acquire the EACs monthly by paying, or receiving, an aggregate net payment based on two variables (1) the facility’s energy output (2) the difference between (a) an initial fixed price, subject to annual escalation, and (b) current local marginal energy prices during the monthly settlement period. We are also working to lower our carbon footprint by taking advantage of our merger with Sprint. Finding ways to increase our service coverage while reducing the energy load of our combined assets.

Cost to realize opportunity

0

Strategy to realize opportunity and explanation of cost calculation

To respond to this cost-saving opportunity, T-Mobile has taken the initiative to enter the renewable energy space. Through our renewable energy use we plan to cut our energy costs by around $100 million in the next 15 years. The cost to realize this opportunity is $0 as the capital costs on these projects have thus far been negligible. Below are three case studies of active major renewable energy projects: 1. Red Dirt Wind Project – Located in Oklahoma it started producing renewable energy for T-Mobile in December 2017. Our long-term agreement is for up to 160MW of the overall 300MW Red Dirt wind project. The Red Dirt wind project is owned and operated by Enel Green Power North America, Inc. (“EGPNA”) and is one of EGPNA’s largest wind farms in Oklahoma. 2. In January 2018, T-Mobile unveiled its second major wind project, Infinity Renewables’ Solomon Forks Wind Project in Kansas, with power generation began operating in July 2019. The power purchase agreement adds another 160MW of wind energy to the T-Mobile portfolio. 3. Otter Creek Wind Project, located in LaSalle County, Illinois adds 158MW of capacity to our portfolio and is online as of March 2020. Combined, the three projects give T-Mobile nearly 480 MW of Renewable Energy capacity. Overall, we have signed deals for over 1 GW of new capacity, diversifying our portfolio in scale, technology and geography. By 2021 we will be producing over 3,000 GWh of renewable energy annually.

Comment

N/A
Opportunity type
Resource efficiency

Primary climate-related opportunity driver
Use of more efficient production and distribution processes

Primary potential financial impact
Reduced indirect (operating) costs

Company-specific description
We are constantly looking to innovate, making our service the best it can be for our customers while reducing our environmental impact in the process. Finding efficiency through technological innovation can improve our network and lower our cost to operate. We do this by employing existing technology as well as devoting research to boost energy efficiency and reduce energy usage across T-Mobile’s entire business. This leads to sizable effects in our energy reduction given the energy intensity of network towers and data centers.

Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
A decrease in energy use of 15% could potentially result in a savings of over $100,000,000 with the assumption of energy priced at $.10 per KwH.

Cost to realize opportunity
0

Strategy to realize opportunity and explanation of cost calculation
Through the lens of sustainability, we are finding new ways to use emerging technologies to make our network more powerful and/or efficient. This has the result of both decreasing our cost to operate and improve our service to our customers. This is a double win for T-Mobile and our customers. Even though data flowing through T-Mobile’s network has increased by over 300% in the last five years, using energy-efficient technologies has allowed our energy intensity to decline by over 50%. Efficiency gains in cell towers have been made primarily through improvements in heating and cooling. By implementing new methods of efficiently controlling the on-site temperature of cell towers, T-Mobile is reducing the amount of propane, diesel and electricity needed for power. Other innovations in lighting controls, power factor improvements and on-site solar technology are continuously being developed to improve the performance and reliability of cellular equipment. This achievement is an example of how T-Mobile fundamentally incorporates sustainability into its long-term growth strategy while providing customers with more reliable service. These innovations are a result of our R&D team’s regular responsibilities. Therefore, there is no additional cost to realize this opportunity and have evaluated the figure to be $0.

Comment
Capital costs are not estimated but would be necessary to achieve some sustainability opportunities.

Identifier

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Products and services

Primary climate-related opportunity driver
Shift in consumer preferences

Primary potential financial impact
Increased revenues resulting from increased demand for products and services

Company-specific description
Through our Un-carrier strategy, we’ve disrupted the wireless communications services industry by listening to our customers and providing them with added value and an exceptional experience. Over the past 7 years our growth has skyrocketed. We have proven that doing what’s right for the customer is also good for business. Embedded in our mission to be the best in the world at connecting customers to their world are three simple elements: the world we live in, the people that live in it, and the technology that connects us to this world. This is at the heart of our strategy and how we view our ability to impact and influence the world around us. We understand that everything is connected. People can’t thrive unless our planet, the world that sustains us, is thriving. The health, well-being and livelihoods of generations to come, and our business, depends on the actions we take NOW to ensure that our planet thrives. We view combatting climate change and making our business more sustainable through investments in areas like renewable energy as a tremendous opportunity for T-Mobile to challenge the status quo and seize both financial opportunity and show leadership on an issue that our customers care about.

</table>

C3.2

(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?
Yes, qualitative and quantitative

C3.2a
Describe where and how climate-related risks and opportunities have influenced your financial planning.

We have set a number of goals to decrease our carbon footprint, including sourcing 100% of our electricity from renewable energy by 2021. We have made the strategic decision to set this goal because of our interest in reducing our dependence on fossil fuels, improving the cost and security of our fuel supply and reducing the harmful impacts of greenhouse gas emissions on the planet, all while providing reliable service for our customers.

We depend on suppliers, their subcontractors, and other third parties for us to efficiently operate our business. While we do not operate in all of the areas in which our suppliers operate, we understand that to some extent our suppliers, for example network hardware suppliers, ability to withstand and recover from climate shocks in their regions (such as Southeast Asia) has a direct impact on our company's business over the medium-term (next 1-3 years). In 2019, we took steps to increase transparency in our supply chain, investing in new screening tools to evaluate the social and environmental risk of our suppliers. The new screening tool called EcoVadis, evaluates companies across four main themes including environment, labor and human rights, ethics and sustainable procurement.

In 2018, T-Mobile became the first US telecommunications company to join RE100. Since then, the company has implemented a number of initiatives to reduce the carbon footprint of its operations. Central to this aim is its portfolio approach to its renewable energy program, with an energy mix of several wind and solar projects through a power purchasing agreement (PPA) financial structure. Although there have been some delays in projects during this last unprecedented year, at the end of 2020, renewable energy accounted for 25.3 percent of our total electricity consumed (1,752,257 MWh of total renewable energy). As more projects are scheduled to come online in the coming months, we’re tracking to reach 100% by the end of 2021. This focus on renewable energy has enabled us to make progress on our industry leading Science-Based Targets. We have achieved 23.4% of our goal to reduce our Scope 1 and Scope 2 emissions by 95% by 2025 from a 2016 baseline. Our focus on low-carbon solutions has already paid dividends for our company, such as our large wind Power Purchase Agreements. Since 2017 we’ve signed renewable energy contracts worth over three-megawatt megawatt hours (MWh). And we continue to set ambitious new goals to focus our ambition on renewable energy and GHG reduction.

As a result of increased severe weather events we are building more resilient networks. We have strong backup systems and built in redundancies. Case Study: As result of our internal scenario analysis, T-Mobile to set a number of goals to decrease our carbon footprint, including sourcing 100% of our electricity from renewable energy by 2021. We have made the strategic decision to set this goal because of our interest in reducing our dependence on fossil fuels, improving the cost and security of our fuel supply and reducing the harmful impacts of greenhouse gas emissions on the planet. In 2016, T-Mobile to set a number of goals to decrease our carbon footprint, including sourcing 100% of our electricity from renewable energy by 2021. We have made the strategic decision to set this goal because of our interest in reducing our dependence on fossil fuels, improving the cost and security of our fuel supply and reducing the harmful impacts of greenhouse gas emissions on the planet. In 2016, T-Mobile to set a number of goals to decrease our carbon footprint, including sourcing 100% of our electricity from renewable energy by 2021. We have made the strategic decision to set this goal because of our interest in reducing our dependence on fossil fuels, improving the cost and security of our fuel supply and reducing the harmful impacts of greenhouse gas emissions on the planet.

- **Is this a science-based target?**
  - Yes, and this target has been approved by the Science-Based Targets initiative

- **Target ambition**
  - 1.5°C aligned

- **Please explain (including target coverage)**
  - We have an officially validated Science-Based Target. T-Mobile commits to reduce combined absolute Scope 1 and Scope 2 GHG emissions 95% by 2025 from a 2016 base year. This commitment includes emissions from Sprint, which was acquired by T-Mobile in 2020. With all current and future reporting values now consolidated under the T-Mobile brand, the base year emissions value was adjusted to account for historical Sprint emissions to allow for an accurate comparison. Our emissions declined by 7% in 2020 Y/Y as we have taken steps to expand our network while signing renewable energy deals that will help us meet our target. In previous years, standalone T-Mobile reported separate absolute targets (Abs 2-5) for each business unit. As a combined entity, this Science-Based Target and our 100% renewable electricity commitment for the entire enterprise (C4.2a Low 1) have replaced these separate targets.

C4.1b
(C4.1b) Provide details of your emissions intensity target(s) and progress made against those target(s).

Is this a science-based target?
Yes, and this target has been approved by the Science Based Targets initiative

Target ambition
1.5°C aligned

Please explain (including target coverage)
We have set an officially validated Science-Based Target. T-Mobile commits to reduce Scope 3 GHG emissions 15% per customer by 2025 from a 2016 base year. This commitment includes emissions from Sprint, which was acquired by T-Mobile in 2020. With all current and future reporting values now consolidated under the T-Mobile brand, the base year emissions value was adjusted to account for historical Sprint emissions to allow for an accurate comparison. As T-Mobile continues to win in the marketplace, we believe measuring our Scope 3 reductions on a per customer basis is the best approach. Achieving greater market share could increase absolute Scope 3 emissions.

RE100

Please explain (including target coverage)
T-Mobile is committed to making sustainability a fundamental part of its strategy, culture and activities, and has committed to source 100% renewable energy for all its electricity usage by 2021. Although the acquisition of Sprint in 2020 nearly doubled the size of T-Mobile's operations and electricity consumption, T-Mobile remains committed to achieving this target by 2021. This commitment is the driving force behind the company reaching an ambitious carbon emission reduction target, alongside implementing energy efficiency savings in facilities and networks.

Is this target part of an overarching initiative?
No, it's not part of an overarching initiative

Please explain (including target coverage)
T-Mobile understands that reducing energy consumption is the most efficient way to reduce emissions. As such, T-Mobile set an updated company-wide energy efficiency target in 2019. This target is a 95% reduction in energy consumption (MWh) per petabyte (PB) of data traffic on T-Mobile's network by 2030.

<tbody>
<tr>
<td>Dedicated budget for other emissions reduction activities</td>
<td>T-Mobile has quickly established itself as the benchmark for the telecommunications industry in renewable energy performance. In April 2017, we made the largest ever wind power investment to date by a US wireless company, signing a long-term agreement of up to 160MW from the new Red Dirt wind project in Oklahoma. T-Mobile has since added three massive wind farms, with the Solomon Forks, Otter Creek, and White Mesa projects contributing approximately 340MW. We’ve also begun diversifying our renewable energy portfolio by adding the Myrtle and Greenville solar farms and participating in Puget Sound Energy’s Green Direct program, altogether adding approximately 130MW to our portfolio. Currently, our projects are producing over 1.7 million MWh of electricity on an annual basis. Our strategy has been to set ambitious goals (such as RE 100) and diversify our renewable portfolio in scale, technology and geography.</td>

**Level of aggregation**

- Product

**Description of product/Group of products**

T-Mobile SyncUp (https://www.t-mobile.com/offers/syncup) gives our customers a variety of ways to drive safer and also save gas (and GHG emissions). The SyncUp system allows maintenance reminders, recall information, fuel levels, battery life, car trouble alerts, and more to be sent straight to our customers' phones. Safer and more efficient driving keeps families secure and lowers the cost of driving on the environment. One example of this can be found in Cobb County, Georgia. The county has equipped nearly 300 vehicles with T-Mobile SyncUP FLEET, including fire and emergency services vehicles. Implementing T-Mobile's services has been seamless, and SyncUP FLEET alone is expected to save the county $50,000 each year in fuel costs and more.

53180

Start date
<Not Applicable>

End date
<Not Applicable>

Comment
(C6.2) Describe your organization's approach to reporting Scope 2 emissions.

Row 1

Scope 2, location-based
We are reporting a Scope 2, location-based figure

Scope 2, market-based
We are reporting a Scope 2, market-based figure

Comment
T-Mobile's market-based Scope 2 emissions include large-scale renewable energy purchases made by the company in 2020. The renewable energy credits from renewable energy projects are retained by T-Mobile.

(C6.3) What were your organization's gross global Scope 2 emissions in metric tons CO2e?

Reporting year
Scope 2, location-based
2755796

Scope 2, market-based (if applicable)
1858206

Start date
<Not Applicable>

End date
<Not Applicable>

Comment
We had five operational renewable projects active in 2020: Solomon Forks, Red Dirt, and Otter Creek wind farms, and Greensville and Myrtle solar farms. We also procured green power in deregulated markets and received bridge RECs from a future renewable project. This led to avoided emissions of 897,590 MT CO2e.

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

No

(C6.5) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

Evaluation status
Relevant, calculated

Metric tonnes CO2e
2801782

Emissions calculation methodology
Purchased Goods and Services activity data was obtained from suppliers and T-Mobile's financial and data analytics team. Supplier-specific emission factors were collected and aggregated based on the type of good or service provided, using a $/metric ton CO2e basis. To convert to metric tons of CO2e, these aggregated emission factors were then multiplied by T-Mobile's 2020 $ purchase volume for each good or service type.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Please explain
T-Mobile is continuously looking to improve the accuracy of its Scope 3 calculations. All purchase volume categorization is reviewed annually for potential improvements. All supplier-specific emission factors are updated annually based on the most current supplier disclosures. Any non-supplier-specific emission factors are reviewed annually to determine if supplier-specific ones are available to replace them.
Capital goods

Evaluation status
Relevant, calculated

Metric tonnes CO2e
1654473

Emissions calculation methodology
Capital Goods activity data was obtained from suppliers and T-Mobile’s financial and data analytics team. Supplier-specific emission factors were collected and aggregated based on the type of capital good provided, using a $/metric ton CO2e basis. For capital goods without available supplier-specific emission factors, emission factors were obtained from the US 2002 Benchmark Model using a $/metric ton CO2e basis. To convert to metric tons of CO2e, all emission factors were then multiplied by T-Mobile's 2020 $ purchase volume for each capital good type.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
98

Please explain
T-Mobile is continuously looking to improve the accuracy of its Scope 3 calculations. All purchase volume categorization is reviewed annually for potential improvements. All supplier-specific emission factors are updated annually based on the most current supplier disclosures. Any non-supplier-specific emission factors are reviewed annually to determine if supplier-specific ones are available to replace them.

Fuel-and-energy-related activities (not included in Scope 1 or 2)

Evaluation status
Relevant, calculated

Metric tonnes CO2e
430000

Emissions calculation methodology
Fuel-and-energy-related activities data was obtained from T-Mobile's Scope 1 and 2 inventories. Electricity consumption data was multiplied by the appropriate upstream electricity factor based on real-world conditions, while fuel and heating data was multiplied by the appropriate fuel-specific upstream factor based on real-world conditions.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Please explain
T-Mobile is continuously looking to improve the accuracy of its Scope 3 calculations. All purchase volume categorization is reviewed annually for potential improvements. All supplier-specific emission factors are updated annually based on the most current supplier disclosures. Any non-supplier-specific emission factors are reviewed annually to determine if supplier-specific ones are available to replace them.

Upstream transportation and distribution

Evaluation status
Relevant, calculated

Metric tonnes CO2e
858288

Emissions calculation methodology
Upstream transportation and distribution activity data was obtained from suppliers and T-Mobile's financial and data analytics team. Supplier-specific emission factors for transportation and distribution services were collected and aggregated using a $/metric ton CO2e basis. To convert to metric tons of CO2e, this aggregated emission factor was then multiplied by 5% of T-Mobile's 2020 $ purchase volume for goods and capital goods, which is the approximate average share of freight cost to purchase price.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Please explain
Upstream Transportation emissions for T-Mobile incorporates transportation services from supplier/manufacturer sites to T-Mobile's distribution center in the USA.

Waste generated in operations

Evaluation status
Relevant, calculated

Metric tonnes CO2e
7180

Emissions calculation methodology
Waste generated in operations activity data was obtained from T-Mobile's third party service contractors. Municipal waste, hazardous waste, and wastewater generation data were multiplied by the appropriate Ecoinvent v3 emission factors.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Please explain
Negative or avoided emissions associated with recycling are handled separately.
Business travel

Evaluation status
Relevant, calculated

Metric tonnes CO2e
8390

Emissions calculation methodology
Business travel activity data is obtained from T-Mobile’s third party service contractors. Travel mileages by air, train, rental car, and private car were multiplied by the appropriate Ecoinvent v3 emission factors. Emissions from nightly hotel stays are also included and calculated using publicly available emission factors.

Please explain
Business travel emissions decreased by 85% in 2020 compared to 2019, largely due to COVID-related travel restrictions.

Employee commuting

Evaluation status
Relevant, calculated

Metric tonnes CO2e
40146

Emissions calculation methodology
Employee commuting activity data is obtained from T-Mobile employee counts, surveys, and security records. Average commuting distances and modes of transportation utilized by the company’s employees are based on survey data of over 1,500 employees. Commuting distances by transportation mode were then multiplied by the appropriate Ecoinvent v3 emission factors.

Please explain
Employee commuting emissions decreased by 82% in 2020 compared to 2019, largely due to COVID-related remote working.

Upstream leased assets

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Please explain
T-Mobile’s scope of boundary is operational control. Since there is no distinction between the data collection of T-Mobile assets and leased assets, a separate calculation is not possible. Thus, all GHG emissions related to T-Mobile upstream leased assets are already included in Scope 1 and 2.

Downstream transportation and distribution

Evaluation status
Relevant, calculated

Metric tonnes CO2e
203347

Emissions calculation methodology
Downstream transportation and distribution activity data was obtained from suppliers and T-Mobile’s financial and data analytics team. Supplier-specific emission factors for transportation and distribution services were collected and aggregated using a $/metric ton CO2e basis. To convert to metric tons of CO2e, this aggregated emission factor was then multiplied by T-Mobile’s 2020 $ purchase volume for downstream transportation and distribution services.

Please explain
Downstream warehouse activities and transportation from T-Mobile’s distribution centers to the point of sale are taken into account.

Processing of sold products

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Please explain
T-Mobile does not produce intermediate products for processing of sold products. Therefore, this category is not applicable.
Use of sold products

Evaluation status
Relevant, calculated

Metric tonnes CO2e
996288

Emissions calculation methodology
Use of sold products activity data was obtained from suppliers and T-Mobile’s financial and data analytics team. T-Mobile collected the quantity of devices sold to customers, e.g. smartphones, simple phones, tablets and wearables, as well as the total number of T-Mobile contracts in the reporting year. These quantities were then multiplied by product-specific electricity consumption factors to determine the lifetime electricity consumption of the sold devices. To convert to metric tons of CO2e, the electricity consumption totals for each device type were multiplied by the carbon intensity of the U.S. grid mix.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
62

Please explain
Product specific energy consumption was based on publicly-available LCA data for supplier products when possible.

End of life treatment of sold products

Evaluation status
Relevant, calculated

Metric tonnes CO2e
33929

Emissions calculation methodology
End of life (EOL) treatment of sold products activity data was obtained from suppliers and T-Mobile’s financial and data analytics team. T-Mobile collected the quantity of devices sold to customers, e.g. smartphones, simple phones, tablets and wearables, in the reporting year. These quantities were then multiplied by product-specific EOL emission factors to determine the metric tons of CO2e associated with EOL treatment. These emission factors were based on publicly-available LCA data for supplier products and internal product carbon footprint studies.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
74

Please explain
End-of-life treatment for sold products is considered for reporting. Emissions avoided through recycling are reported separately.

Downstream leased assets

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
T-Mobile’s scope of boundary is operational control. Since there is no distinction between the data collection of T-Mobile assets and leased assets, a separate calculation is not possible. Thus, all GHG emissions related to T-Mobile upstream leased assets are already included in Scope 1 and 2.

Franchises

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
The category has been excluded from the calculation because franchises do not fall within T-Mobile's operational control boundary.

Investments

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
T-Mobile's Investments were negligible in 2020. Therefore, the category was excluded for the Scope 3 calculation.
Other (upstream)

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
All upstream categories defined in the GHG protocol guide have been accounted for in T-Mobile's GHG emissions

Other (downstream)

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
All downstream categories defined in the GHG protocol guide have been accounted for in T-Mobile's GHG emissions

C6.7

(C6.7) Are carbon dioxide emissions from biogenic carbon relevant to your organization?
No

C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
27.17

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
1911386

Metric denominator
unit total revenue

Metric denominator: Unit total
68397000000

Scope 2 figure used
Market-based

% change from previous year
7

Direction of change
Increased

Reason for change
While T-Mobile's Scope 1+2 emissions decreased by 7% in 2020 compared to the combined T-Mobile and Sprint total in 2019, T-Mobile's gross revenue decreased by 13% compared to the combined T-Mobile and Sprint total in 2019. This decrease in revenue is due to decreased Sprint business activity once acquired by T-Mobile in 2020.

C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes
(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

<table>
<thead>
<tr>
<th>Greenhouse gas</th>
<th>Scope 1 emissions (metric tons of CO2e)</th>
<th>GWP Reference</th>

C7.9

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year? Decreased

C7.9a

(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

<table>
<thead>
<tr>
<th>Change in emissions</th>
<th>Direction of change</th>
<th>Emissions value (percentage)</th>
<th>Please explain calculation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change in renewable energy consumption</td>
<td>Decreased 11</td>
<td>233343 metric tons CO₂e</td>
<td>We increased our renewable energy purchases by 11% year over year which resulted in an 11% decrease in emissions year over year. The percentage change is calculated by dividing the change in Scope 1 and 2 emissions attributable to additional renewable energy consumption by the previous year’s Scope 1 and 2 emissions: (233,343 tCO₂e / 2,060,817 tCO₂e) * 100% = 11%.</td>
</tr>
<tr>
<td>Other emissions reduction activities</td>
<td>Decreased 11</td>
<td>225855 metric tons CO₂e</td>
<td>We had an average efficiency increase of 11% across our portfolio. The percentage change is calculated by dividing the change in Scope 1 and 2 emissions attributable to other emissions reduction activities by the previous year’s Scope 1 and 2 emissions: (225,855 tCO₂e / 2,060,817 tCO₂e) * 100% = 11%. T-Mobile has been working diligently to upgrade our cellular network equipment to handle a larger data and customer demand utilizing equipment that is more energy efficient. High efficiency rectifiers, antennas, and cabinet designs have achieved an efficiency across our network. Lighting, cooling, controls and design projects in our retail and commercial spaces are also yielding efficiencies.</td>
</tr>

**C9. Additional metrics**

---
C9.1

(C9.1) Provide any additional climate-related metrics relevant to your business.

<table>
<thead>
<tr>
<th>Description</th>
<th>Metric value</th>
<th>Metric numerator</th>
<th>Metric denominator (intensity metric only)</th>
<th>% change from previous year</th>
<th>Direction of change</th>
</tr>
</thead>
<tbody>
<tr>
<td>Energy usage</td>
<td>105</td>
<td>7,158,776</td>
<td>68,397,000,000</td>
<td>25</td>
<td>Increased</td>
</tr>
</tbody>
</table>

Please explain

We utilized approximately 25% more energy per million dollars of revenue we generated. Emissions increased by 7% on a tCo2 per million of revenue basis. While T-Mobile's energy usage increased by 9% in 2020 compared to the combined T-Mobile and Sprint total in 2019, T-Mobile's gross revenue also decreased by 13% compared to the combined T-Mobile and Sprint total in 2019. This decrease in revenue is due to decreased Sprint business activity once acquired by T-Mobile in 2020.

C10. Verification

C10.1

(C10.1) Indicate the verification/assurance status that applies to your reported emissions.

<table>
<thead>
<tr>

(C11. Carbon pricing)

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?
No, and we do not anticipate being regulated in the next three years

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?
No

(C11.3) Does your organization use an internal price on carbon?
Yes

(C11.3a)
(C11.3a) Provide details of how your organization uses an internal price on carbon.

**Objective for implementing an internal carbon price**
- Stakeholder expectations
- Change internal behavior
- Drive energy efficiency
- Drive low-carbon investment
- Identify and seize low-carbon opportunities

**GHG Scope**
- Scope 1
- Scope 2

**Application**
Carbon Pricing is currently not implemented by US legislation. T-Mobile has its own internal carbon price at $3.00/MWh. This internal price places a monetary value on energy (and the resulting greenhouse gas emissions), which then factor into project selection decisions and business operations, prioritizing those that lower the company's carbon footprint progress towards 100% renewable energy.

**Actual price(s) used (Currency /metric ton)**
- $3

**Variance of price(s) used**
- Uniform Pricing

**Type of internal carbon price**
- Shadow price

**Impact & implication**
Carbon Pricing is currently not implemented by US legislation. T-Mobile has its own internal carbon price at $3.00/MWh. This internal price places a monetary value on energy (and the resulting greenhouse gas emissions), which then factor into project selection decisions and business operations, prioritizing those that lower the company's carbon footprint. Our energy team has prioritized LED lighting improvements as they lower our spend on electricity and reduce our need to purchase REC’s at our internal carbon price of $3.00.

---

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?
- Yes, our suppliers
- Yes, our customers
- Yes, other partners in the value chain

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

**Type of engagement**
- Compliance & onboarding

**Details of engagement**
- Included climate change in supplier selection / management mechanism

**% of suppliers by number**
- 10

**% total procurement spend (direct and indirect)**
- 99

**% of supplier-related Scope 3 emissions as reported in C6.5**
- 95

**Rationale for the coverage of your engagement**
We look for suppliers who remind us of ourselves—ethical, hard-working, and customer-focused. And we want them to share our commitment to the environment. Before selecting or retaining suppliers, we consider their business integrity and let them know about our ethical expectations. To expand our ability to better evaluate our supply chain, we engaged a leading third-party evaluation tool, the EcoVadis IQ tool to assess the basic environmental, social and ethical performance of our suppliers. We were able to evaluate approximately 2,450 companies which makes up over 99% of sourceable procurement spend. This effort enables our enterprise risk management team and our procurement managers to gain better insight on the social and environmental risks and performance of our suppliers.

**Impact of engagement, including measures of success**
We measure the impact of our engagement based on the number of suppliers we evaluate. We have so far evaluated approximately 2,450 companies on a basic risk assessment level and we plan on continuing our efforts to look broadly and deeply at our supply chain for sustainability risk and performance. Our engagement with suppliers includes conversations on ways to collaborate on energy efficiency, reducing greenhouse gas emissions, and climate change advocacy. As a measurement of success, in 2018, one of our major suppliers, Ericsson published a Science-Based Target. We believe that as we are able to assess more of our supply chain for environmental and social risk, and as we incorporate sustainability measures into more of our purchasing, we are building a stronger and more climate resilient company.

**Comment**
C12.1b Give details of your climate-related engagement strategy with your customers.

**Type of engagement**
- Education
- Information sharing

**Details of engagement**
- Run an engagement campaign to educate customers about your climate change performance and strategy
- % of customers by number: 100
- % of customer-related Scope 3 emissions as reported in C6.5: 100

**Portfolio coverage (total or outstanding)**
- <Not Applicable>

Please explain the rationale for selecting this group of customers and scope of engagement:

We engage with 100% of our customers by making available educating customers information on our climate actions, advocating for change, inspiring our customers and setting ambitious goals. We believe our entire customer base has the capacity to enact change, including increasing the number of recycled and reused devices to reduce environmental impact. Some examples of our engagement include: T-Mobile informs customers through the Sustainability section of our corporate website, a link which can be found on our home page or at https://www.t-mobile.com/responsibility/sustainability. We publish for our customers easy to read explanations of how we approach renewable energy and climate change, from explaining our Science-Based Target setting to revealing our industry leading goal to use 100% renewable energy by 2021. T-Mobile also advocates for change, in September 2019, T-Mobile participated in NYC Climate Week, sponsoring Digital With Purpose: Delivering a Smarter 2030, a report released by the Global e-Sustainability Initiative (GeSI) and Deloitte. The report calls upon global governments, businesses, and individuals to identify ways to use digital technology to actualize the United Nations’ 2030 Agenda for Sustainable Development. T-Mobile believes in inspiring our customers: In 2020 T-Mobile collected 7.9 million used devices including phones, smartwatches, tablets, hotspots and IoT items. These devices were then given new life by being reused or resold or sent to be responsibly recycled by certified third-party facilities, which were either reused, resold or recycled. For every one million devices that are recycled, 35,000 pounds of copper, 772 pounds of silver, 75 pounds of gold and 33 pounds of palladium are recovered, which can be used again in new devices, preventing over-extraction. We also demonstrate leadership by setting ambitious goals. We support the commitment of the Science-Based Targets Initiative (SBTi) and world governments to prevent dangerous climate change by limiting global warming to well below 2 degrees Celsius. To do our part, we have set science-based emissions targets. Our goals have been officially verified by the SBTi and we will continue to work with leading environmental non-profit organizations to adopt best practices in target setting.

**Impact of engagement, including measures of success**

We measure the impact of our engagement based on the number of phones reused or recycle. We have steadily increased that number since our program inception in 2006: As a measurement of the success of the program, In 2020, we reused, resold or recycled over 7.9 million devices, the equivalent of avoiding over 100,000 tons of emissions compared to their impact if discarded in a landfill. T-Mobile uses Social Media, including Facebook (@TMobile) with over 8M followers, and Twitter with 1.4M followers, to post, share and tweet about T-Mobile’s commitment to energy efficiency and resource conservation. T-Mobile encourages our customers across the globe to save energy, through smart phone use to surf the web as well as encouraging the use of apps, like those that track habits, adjust thermostats, and turn on & off lights remotely. In 2018 we planted 27,000 trees through our #TreeMobile program. In 2019 we planted over 300,000 trees with a goal of planting 500,000 trees in partnership with the Nature Conservancy.

C12.1d Give details of your climate-related engagement strategy with other partners in the value chain.

T-Mobile continues to be recognized as a global leader in defining and advancing the standards of ethical business practices as a World’s Most Ethical Company by the Ethisphere Institute. 2020 marks 12 consecutive years T-Mobile has been the only US wireless provider to receive this award for aligning principle with action, keeping trust part of its corporate DNA, and shaping future industry standards by creating the gold standard. We aim to inspire our business partners and to hold them to the same standard, including environmental standards, through our Supplier Code of Conduct.

We also engage our employees internally. With T-Mobile’s internal social network, our Corporate Social Responsibility team shares information regarding energy efficiency and sustainability to approximately 75,000 (as of 12/31/2020) [RA1] [NA2] T-Mobile employees, including the promotion of our green energy usage and commitments. Our employees are our greatest asset and can spread the word about how seriously T-Mobile takes its environmental responsibility and what steps we are taking to positively impact climate change.

In 2019 we held an in-person event for our headquarters employees on Earth Day, as well a streaming webcast to our employees around the country. We reviewed our RE100 commitment, learned about our real estate sustainability, and heard about our partnership with the Nature Conservancy.

C12.3 Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?

**Trade associations**

Other

C12.3b
Are you on the board of any trade associations or do you provide funding beyond membership?
Yes

Trade association
The Global e-Sustainability Initiative (GeSI) is a leading source of impartial information, resources and best practices for achieving integrated social and environmental sustainability through ICT. GeSI helps key policymakers, industries, stakeholders, and households understand the role ICT can perform in achieving the Sustainable Development Goals (SDGs).

Is your position on climate change consistent with theirs?
Consistent

Please explain the trade association's position
GeSI is committed to sustainability actions and outcomes. Our members and partners use their collective knowledge and experience to identify opportunities and develop solutions for improving energy and resource efficiency, reducing carbon emissions and footprints, ensuring sustainable practices in the supply chain, encouraging access to sustainable technologies, and supporting ICT-enabled transformation across all industries and sectors around the globe.

How have you influenced, or are you attempting to influence their position?
We participate as member of the Board of Directors of the GeSI organization. We also sit on the Climate Change and Human Rights committees.

In 2017, T-Mobile joined the RE 100, a collaborative, global initiative uniting more than 100 influential businesses committed to 100% renewable electricity, working to massively increase demand for—and delivery of—renewable energy. As a member we have set a public goal to source 100% of our global electricity from renewable sources by 2021 and to publicly report our progress on an annual basis.

In March of 2018, the U.S. Environmental Protection Agency (EPA) welcomed T-Mobile to the Green Power Partnership – a collective of companies leading the way in renewable energy. T-Mobile is the only major wireless company in the Partnership for its entire U.S. footprint. T-Mobile joins Apple, Google, Microsoft and other tech giants as a Green Power Partner.

In October of 2018, T-Mobile was recognized by both the Environmental Protection Agency (EPA) and Center for Resource Solutions (CRS) for its industry-leading green energy initiatives. At the Green Power Leadership Awards in Houston, the EPA recognized the Un-carrier for “exemplary action and dedication to significantly advance the development of U.S. renewable energy markets through voluntary green power use.” Plus, the CRS also named T-Mobile “as an industry leader that is innovating and championing renewable energy and whose actions are supporting the accelerated development of green power markets.”

In September of 2019, T-Mobile sponsored Digital With Purpose: Delivering a Smarter 2030, a report released by the Global e-Sustainability Initiative (GeSI) and Deloitte during NYC Climate Week. The report calls upon global governments and businesses to identify ways to use digital technology to actualize the United Nations’ 2030 Agenda for Sustainable Development.

In March 2021 we were recognized by the EPA as a Gold Tier member of the 2020 Sustainable Material Management Electronics challenge. The challenge recognizes electronics manufacturers, retailers, and brand owners who have shown commitment to and innovations in sustainable materials management and responsible electronics recycling. The data supporting this award was inclusive of legacy T-Mobile locations and operations.

What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?
Our T-Mobile Code of Business Conduct describes how we ensure consistency in our lobbying efforts. All employees are trained on the code annually and the code says only authorized employees of T-Mobile are allowed to lobby government officials and employees on behalf of T-Mobile. The code details that business decisions be consistent with the minimization of environmental impact, which is in line with T-Mobile’s commitment to make sustainability a fundamental part of its strategy.

Read more about our policies here https://investor.t-mobile.com/corporate-governance/governance-documents/default.aspx
(C12.4) Have you published information about your organization's response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).

Major sources of emissions

ALLOCATION CALCULATION NOT PERFORMED: In 2020, T-Mobile's entire Scope 1 total was 53,180 tons. To properly perform the allocation calculation, the customer should divide the 53,180 tons by T-Mobile's 2020 revenue (provided in SC0.1), then multiply by the customer's 2020 spend with T-Mobile. Major sources of emissions are as follows: Scope 1: Fleet gasoline, fleet diesel, jet fuel, diesel generator fuel, propane generator fuel, gaseous agents, refrigerants Scope 2: Purchased electricity (enterprise-wide) Scope 3: Purchased Goods and Services, Capital Goods, Use of Sold Products
