

Fleet Management for Public Works

T-Mobile for Government and Geotab provide a robust and scalable solution for local and state fleets. Our solution helps government agencies manage vehicles such as salt spreaders, snow plows, street sweepers, and waste management vehicles.

A smarter solution for public works

This public works solution helps ensure that all infrastructure is serviced adequately while controlling costs, tracking material usage, and getting a full view of your ever-changing fleet on one database.

Monitor material usage.

Provides insights to avoid excessive usage by tracking application rates, total accumulated and material type used, for both solids and liquids. This data helps fleet managers make informed decisions to safeguard our motorways and natural environment.

Get freedom in flexibility.

The choice is yours. Separate government fleets by databases or have a full view of all fleet types in one database. Use vehicle faults and diagnostics to monitor sub-optimal vehicle performance for indicators of pending failures. Data can be used to develop preventative maintenance plans to ensure equipment availability. Customize and align the public works solution to your government needs and fleet goals.

An industry-leading telematics solution

Many government agencies have partnered with Geotab for their public works solutions. In turn, Geotab has teamed up with T-Mobile and their amazing network to take advantage of the ability to capture, measure, and analyze crucial fleet data in near real time.

Highlights

- Mapping and geospatial reporting
- Automated reporting for regulatory compliance and billing
- Remote diagnostics
- Active Tracking
- Route completion outputs
- Open SDK for integration

Key features

Fleet management and optimization

Track vehicles in real-time. Improve routing and help reduce costs with preventative maintenance.

Cost and material management

Avoid overusing materials. Manage the rates of application of salt, brine, and other materials and help control costs.

Mixed fleet, centralized data

Access and utilize mixed fleet data in one place to manage your fleet operations.

Platform versatility

Take advantage of added flexibility and integration. Extend the Geotab platform further with select add-ons from third party providers such as cameras, light bars, sirens, and more.

Compliance adherence

Ensure your public works fleet is in line with maintenance standards, policies, and procedures.

Mapping and spatial outputs

Utilize client-based mapping to know which roads have been serviced using interactive maps and geospatial reporting. Track live level of service compliance.

Let T-Mobile for Government and Geotab demonstrate how you can take your fleet to the next level.
