

INTRODUCING THE ScreenRay 2

Powered by LTE

ScreenRay 2 combines the best digital signage platform with T-Mobile's flexible LTE connectivity to create the best in location experiences!

With the ScreenRay 2, get ready to experience:

Rapid Innovation

With Raydiant powered by T-Mobile LTE you can frequently and easily adjust messaging, create highly targeted ads for every location and develop presentations to fit all of your stores and each unique customer. Stay ahead of the competition and innovate faster with speedy signage updates from anywhere at any time.

Remote Management

When Raydiant is paired with T-Mobile LTE technology, your IT team can rest in peace knowing that all network devices are configured properly and operating in unison thanks to easy remote access to firmware updates, security patches and configuration changes. With different connectivity solutions and sources for your signage, you can minimize efforts and avoid unwanted human error.

Isolated Network Security

Maximize ROI on your digital signage by reducing the security risks that come with multiple connected devices to your network. As more and more endpoints are deployed, your network grows increasingly more complex, putting employee and customer personal credit data in danger and your company at risk of finds and permanent brand damage.

Improved Customer Experience

With high bandwidth offered through T-Mobile's LTE connectivity effortlessly stream live videos and use large files to grab your customer's attention and enhance your in location experience.

Connectivity

LTE / GSM / CDMA / GPS/ DCS / PCS / WCDMA
standard comms

850MHz to 1900MHz (Band 2, 4, 66 and 5 compatible);
