

## Cloud-Based Security

T-Mobile for Business offers two different as-a-service, cloud-based solutions that provide users trusted access to the cloud without the need to purchase or maintain expensive hardware.

### Secure Web

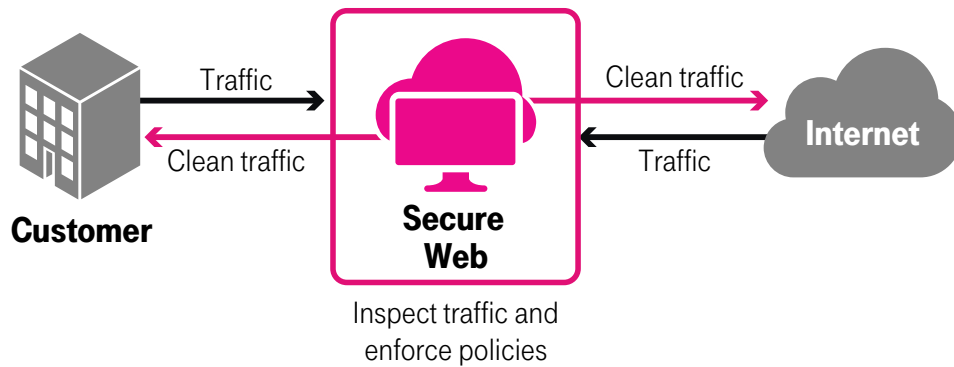

**Get immediate threat detection and protection** at the cloud level to help give users secure access across devices and locations. Experience streamlined security and near instant data filtering with cost-effective plans that allow for easy expansion and eliminate hardware and maintenance costs.

### Secure Private Access

**Give users more secure and full access to internal applications** without the dangers of giving them access to your entire network. This solution works well for contractors, partners, and temporary employees by permitting select access to an authorized suite of company apps. Flexible pricing options allow you to add and remove users with ease, so you purchase only what you need.

## Secure Web

- Easily set web and mobile usage policies
- Examines and monitors internet traffic
- Near real-time threat correlation without backhaul latency
- Consistent security regardless of location or device
- Deploys protection everywhere when a threat is detected at any location
- Central setup and administration of policies
- On-demand visibility and reporting

## Secure Private Access

- Secure, fast access to company applications without access to network
- Eliminates need to log in to VPN
- Uses policy to determine if user is authorized for access to app
- Connects a named user to a named application
- Eliminates VPN hardware for rapid deployment
- Connects across locations
- Applications stay more secure by isolating traffic
- Easy administration with central portal
