5G ON 600MHZ—T-MOBILE'S FARTHEST REACHING SIGNAL

- T-Mobile is laying a solid, broad foundation for its 5G network by blanketing the country with 600 MHz low-band spectrum. The Un-carrier's strongest, most powerful signal reaches farther than its other spectrum to bring 5G to more people—including those in rural America—and it brings 5G deep into buildings.
- T-Mobile has untouched 600 MHz spectrum dedicated to 5G. Only the Un-carrier is capable of launching nationwide 5G without taking spectrum away from other customers.

REAL, TRANSFORMATIVE 5G REQUIRES A RANGE OF SPECTRUM

- Once the merger with Sprint is complete, the New T-Mobile will add critical depth to the network with 2.5 GHz mid-band spectrum. Mid-band spectrum provides the balance of coverage and capacity that enables a seamless and meaningful 5G experience.
- T-Mobile will continue building out 5G in millimeter wave (mmWave), where it makes sense, like dense urban areas. Millimeter wave delivers massive capacity, but only over a very small footprint. It is easily blocked by things like doors, windows, walls, trees and leaves.
